Rosa Lee

Bonds govern the world around us. Chemical bonds build our environment and regulate our interactions with our surroundings. When you take in the sharp aroma of your morning coffee, odorant molecules rise from your cup and bind to your olfactory receptors, triggering the twisting and rearrangement of the peptide bonds of the receptor. Our treatment of the environment binds us more tightly than ever before. Wildfires, zoonotic diseases, and climate change have all intensified over the past year, causing destruction with seemingly no end in sight lest we change our actions. Social bonds color our daily lives in new, unforeseen ways. Bustling lecture halls and social gatherings are now replaced by Zoom calls, with familiar faces and warm conversation emanating from rectangular boxes on our screens.

In this issue, we explore the ways in which bonds, of all types, shape us and our surroundings. Microrobots that act as moveable bridges between neuron clusters are opening new ways to study neuronal communication. New algorithms that predict off-target binding of CRISPR guide RNAs provide an improved method for anticipating potential undesired effects of CRISPR-Cas9 genome engineering experiments. And student research in the coastal waters of French Polynesia sheds new light on resilience within coral reefs, located within an ephemeral network of anthropogenic disturbances, environmental symptoms, and scientific struggles to preserve one of the most important ecosystems on planet Earth.

This semester, our writers and editors, working from distant locations and time zones, have faced both challenges and unexpected advantages in working on this issue. While our writers can no longer drop by a researcher's office on campus, the new remote format allowed our interviews team to talk to engineers in Italy who have developed an affordable and accessible pulmonary ventilator to aid in the fight against COVID-19. It also allowed us to hear from two wonderful sets of speakers located across the country. Former BJS editor-in-chief Yana Petri, now the co-founder and editor-in-chief of the *MIT Science Policy Review*, spoke to our writers about the process of beginning a new science publication. Our writers also engaged in a panel discussion with science journalists Shira Feder, Eric Boodman, Jane Hu, and Kate Gammon, who write for publications varying from *STAT* to *The New York Times* to *Nature*, on their experiences navigating the interface between the public and the scientific community.

During this pandemic, science is at the center of our lives. We look to scientists and healthcare professionals to characterize, understand, and develop therapeutics for this disease. The surge of research activity surrounding SARS-CoV-2 only amplifies the need for accurate and careful scientific reporting. With this responsibility in mind, we are proud to present the Fall 2020 issue of the Berkeley Scientific Journal.

TABLE OF CONTENTS

Features

- 4. mRNA: The Next Frontier In Vaccine Science [Nachiket Girish](#)
- 7. Plastic: It's What For Dinner [Emily Pearlman](#)
- 16. Microrobots: Bridging The Neuronal Gap, One Micron At A Time [Natalie Slosar](#)
- 25. The 'King Of Poisons' Journeys Underground In In Search Of Water [Jessica Jen](#)
- 28. Unlocking Peto's Paradox [Chris Zhan](#)
- 37. Schizophrenia Through The Years [Anisha Iyer](#)
- 46. Darwin: Chimp or Chump? [Lilian Eloyan](#)

Interviews

- 11. Why Are We Here? A Journey Into The Quantum Universe (Dr. Hitoshi Murayama)
[Amar Shah, Michelle Yang, and Elettra Preosti](#)
- 20. Beyond the Racetrack: The Perfect Formula For A Ventilator (Simone Resta)
[Elettra Preosti](#)
- 32. Exploring Cancer Metastasis Outside The Genome (Dr. Hani Goodarzi)
[Timothy Jang and Ananya Krishnapura](#)
- 41. Machine Learning Design Optimization for Molecular Biology and Beyond (Dr. Jennifer Listgarten)
[Bryan Hsu, Natasha Raut, Kaitlyn Wang, and Elettra Preosti](#)
- 49. Applications of Materials Science: From Modeling To Medical Use (Dr. Kevin Healy)
[Esther Lim, Alexander Peterson, Sabrina Wu, Ananya Krishnapura](#)

Research

- 53. Quantifying Within-Day Abstract Skill Learning and Exploring its Neural Correlates
[Gabrielle Shvartsman, Ellen Zippi, and Jose Carmena](#)
- 60. Coral Cover and Algae Growth Along a Water Quality Gradient in Moorea, French Polynesia
[Savannah Sturla](#)
